Alkaliser 106pi & 106pip	139	204
Office Dispenser	199	239

Our engineer service – our engineer will

### Filter changes

Yearly filter changes are needed to keep your filter system working effectively.

There are 2 options available

Each year, approximately one month before your filter change is due, we will contact you and ask which option you would prefer-

Self-fit

We post your set of 4 filters to you and you fit them yourself. This is really easy with our clickfit system. As easy as changing a light bulb.

Our engineer service

If you prefer not to touch your system at all our engineer can change your filters for you.

3yrly refurb

Once every 3 years your system will need a new reverse osmosis membrane and tank in addition to the other 4 filters.

#### Self-fit

This involves slightly more work than the standard yearly filter change. The 4 filters and reverse osmosis membrane are all easy clickfit as before. The tank will also need to be changed. Full instructions will be sent with your refurb kit.

#### Engineer Service

If you prefer not to touch your system our engineer will do your refurb for you.
